

(2) Intersection with a Right-Turn Lane

Where the right-turn lane is not wide enough for strip installation, the installation shall, as a rule, end 10 m before the end of the painted island for the right-turn lane. There shall be no installation at the road shoulder from 30 m before the stop line to the stop line on the far side of the intersection.

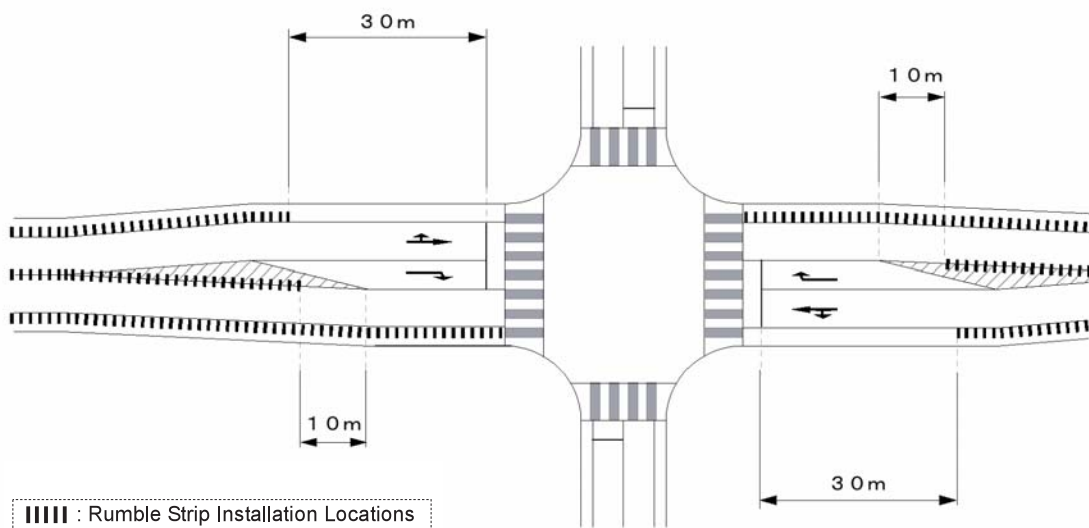

Figure 4-2: Installation example at an intersection with right-turn lane

Rumble strips shall be installed only if the right-turn lane is wide enough for installation, and if it is also necessary to install rumble strips to prevent collisions between right-turning vehicles and oncoming vehicles. In the latter case, installation shall be only up to the stop line.
