

(7) Residential and other private roads

At intersections with residential and other private roads, installation at the shoulder shall end 10 m before the start of the intersection curve, in consideration of bicycles and other light vehicles. Where a highway intersects with a private road from a farm field, rumble strips shall be installed continuously on the highway if the traffic volume of the farm road is low. In any case, it is desirable to obtain the consent of residents.

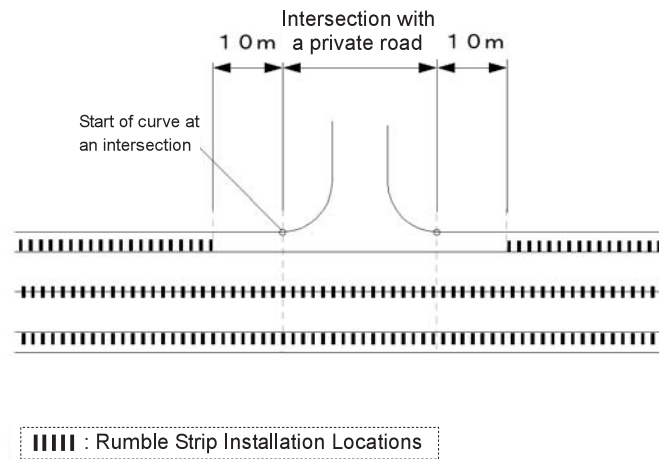

Figure 4-8: Example of installation at a junction with residential or other private roads

(8) Access to stores or other commercial facilities

Where there is an access road to a commercial facility such as a store, installation at the centerline shall end 10 m before the start of a curve at an intersection, in consideration for vehicles entering and exiting there. If it is a commercial area with a record of frequent head-on collisions and therefore the rumble strips are to be installed at the junction, however, it is desirable to obtain the consent of local residents.
